## CASE STUDY

# Health Monitoring Hub

## Development insights

-  For monitoring of critical health signs like oxygen level, weight, blood sugar user can view the data on mobile app.
-  Multiple health factors and the user's health status can be stored in single applications.
-  To easy reminder of medical consultation or appointment there is a feature within the same mobile application for ease of user.
-  The user's past medical history is also stored over the timeframe.

## Technology used
